

One member database, **connected to everything you run**

eMembership connects to the accounting, payroll, payment, and communication tools your staff already relies on. Our own REST API keeps everything else in your operation, from your public website to your data warehouse, in sync with one member database.

THREE WAYS DATA MOVES IN AND OUT

REAL TIME

Secure REST API

Real-time access to your member database, customized during Discovery. It lets you integrate realtime member data into your website or other applications to check member status, employment, or dues balance.

BULK

Data Pipelines

For scheduled, high-volume transfers, eMembership supports secure file exchange and system-to-system integrations through technologies such as SFTP, Boomi, and Microsoft Azure services. Saved import templates automatically map and reconcile recurring files.

REPORTING

Reports and Exports

Answer ad hoc questions with a visual report builder, plus optional read-only SQL access for advanced users. Configurable CSV and Excel exports, including GL mapping, feed your accounting system on your schedule.

WHAT CLIENTS COMMONLY CONNECT

PAYMENTS

PayPal Stripe Authorize.net Converge Braintree
 EPN

ACCOUNTING AND PAYROLL

QuickBooks Great Plains ADP Paychex
 Paylocity Kronos UKG

EMAIL AND TEXT

Mailchimp SendGrid Twilio
 Azure Communication Services

DOCUMENTS, MEETINGS, AND PRODUCTIVITY

DocuSign Microsoft 365 Zoom Zoho

WHAT UNIONS BUILD WITH IT

-  **Members served on your existing website.**
 Balances, statements, and online payments can be embedded through the API, so members log in where they always have.
-  **Outside systems stay in sync.**
 Training records, contract data, and pension statements connect through the API instead of manual re-entry.
-  **Month-end close without re-keying.**
 GL-mapped export files load directly into QuickBooks, Great Plains, or another general ledger.

Your integrations, scoped before go-live

Every union starts with a base set of eMembership APIs, all documented with Swagger. Because the platform is highly configurable, no two implementations are identical: during a structured Discovery Project we review sample APIs with your IT team and tailor your final API to your specific implementation.

- SOC 1 and SOC 2 audited, ISO 27001 certified facility
- US-based support
- Two platform releases per year
